(54) DATA REPRODUCTION DEVICE AND METHOD

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a data reproduction device that can reduce the processing amount in the case of special reproduction such as fast forward reproduction and enhance a data access speed at fast forward reproduction.

SOLUTION: A sector detection circuit 4 generates 1st reproduction control information by using address information of MPEG data reproduced by an optical pickup 2, a stream detection circuit 9 generates 2nd reproduction control information corresponding to a start position of each picture included in the MPEG data being a reproduction signal by using the 1st reproduction control information and whose error is corrected by an error correction circuit 7, and a system controller 19 is used to control to output part of the MPEG data for fast forward reproduction while ring to the 2nd reproduction control information. Thus, smooth reproduction is realized by reducing a
